HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP mRNA or antibodies specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular or fibrotic

The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-1, and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-1, wisp polypeptides, designated WISP-1, WISP-2 products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and blastococalic disorders, haematopolesis-related disorders, tissue-growth disorders, bone-related disorders such as other wounds, connective tissue disorders, burns, inclsions, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     angiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock-out animals. Antibodies can be used to induce death in WISP-1, 2 or 3 overexpressing

The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP manA or antibodies specific for HICP can be used to treat disorders, such as a cardiovascular of fibrotic disorder, characterized by aberrant cell proliferation. The
                  Heparin-induced CCN-like protein; HICP; cell-associated activity; ss; cardiovascular disorder; aberrant cell proliferation; fibrotic disorder.

                                                                                 The invention provides a rat heparin-induced CCN-like protein (HICP) protein. Agents that stimulate or inhibit HICP protein activity or expression, antisense HICP nucleic acid molecules and HICP antibodies, can be used to modulate cell-associated activity. HICP modulators can be used to treat disorders characterized by aberrant HICP protein activity or expression. Probes capable of hybridizing to HICP motel activity specific for HICP can be used to detect HICP activity in a biological sample. HICP can be used to treat disorders, such as a cardiovascular of fibrotic disorder, characterized by aberrant cell proliferation. The

disorders such as breach invention and colon cancer or melanoma. The products such as breach ovariant and colon cancer or melanoma. The products can be used to treat arteriosclerosis. The products can also be used to treat diseases e.g. benign and malignant tumours, used to treat other diseases e.g. benign and malignant tumours, leakach of the products and plant, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal, and blastocoelle disorders, heamatopolesis-related disorders, tissue-growth disorders, bone-related disorders such as osteoporosis, trauma such as disorders, including such disorders, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, angiogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used in the production of transgenic or knock out animals.
                                                                                                               The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-3 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related
New isolated Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     286
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes human growth factor-like protein (HGFLP) which has homology to connective tissue growth factor (CTGF) and fisp-12, which are members of the platelet-derived growth factor (PDGF) and superfamily of growth factors. Antisense oligonucleotides and HGFLP antagonists can be used to treat or prevent cancer, and connective fissue disorders including ankylosing spondylitis, atherosclerosis, Dupuytren's contracture, eosinophilic fascilitis, Felty syndrome, Goodpasture's disease, Hunter syndrome, Hurler syndrome, keloids, Marfan syndrome, nodular fascilitis, osteogenesis imperfecta, polyarthritis and restenosis following angiophasty. HGFLP antibodies and polynucleotides can also be used in diagnostic assays for conditions or

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, also be used in disgnésing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in disgnestic immunoassays e.g. radioimmunoassays or enzyme also be used in manosorbent gassays (ELISA). Disorders which are disgnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardioasscular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. foconeal infections caused by bacteria, viruses and fungi and coular disorders e.g. foconeal infection. The polypeptides can also be used at also decreased to repensate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The present sequence represents a human secreted protein encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        735

The invention provides novel human secreted proteins and polynucleotides encoding them. The secreted proteins can be expressed by standard concoding them. The secreted proteins and polynucleotides are recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the cliented include autoimmunoassays or aradioimmunoassay or enzyme disorders and in diagnostic immunoassays or, aradioimmunoassays or enzyme clinked include autoimmune diseases e.g. reducing arthritis, created include autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, verborovascular disorders e.g. cardiac arrest, verborovascular disorders e.g. corneal infection. The polypeptides can also be cused to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for

                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a human PRO261 nucleotide sequence. PRO261 is a growth factor. The invention relates to isolated antibodies which bind to a polypeptide. The "PRO" polypeptides are encoded by genes which are over expressed in the genome of tumour cells. Vectors and host cells comprising the nucleic acid encoding the antibodies are used in the production of the antibodies. The antibodies and nucleic acids encoding them are used for diagnosing a tumour in a mammal. The antibodies are used for inhibiting the growth of tumour cells and identifying compounds that inhibit a blological or immunological activity of and/or expression of a PRO187, PRO533, PRO214, PRO210, PRO211, PRO230, PRO261, PRO261, PRO261, PRO217, PRO261,

AAS21244-AAS21518 encode for novel human secretory and transmembrane
PRO polypeptides. The PRO polypeptides are useful to detect other
PRO polypeptides, to link bloactive molecules to cells expressing
PRO polypeptides, to modulate biological activities of cells expressing
PRO polypeptides, and to detect the presence of mammalian lung, colon,
breast, prostate, rectal, cervical or liver tumours by comparing PRO
polypeptide expression in a cell sample to that in a control sample.
Some of the 275 sequences are also useful to stimulate the release of
tumour necrosis factor-alpha (TNF-alpha) from human blood, the
proliferation or differentiation of chondrocytes, the proliferation of gene expression in pericyte cells, the release of proteoglycans from
cartilage, the proliferation of inner ear utricular supporting cells or T-lymphocytes, the release of a cytckine from peripheral blood
monocytes (PBMCs), or the proliferation of endothelial cells. Some of
the RPO polypeptides may modulate glucose or free fatty acid uptake by
skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide
to factor VIIA. The PRO polypeptides can be used in assays to identify
mon collinear and a promoter and a procession of the colling and a procession of the cells or by adipocytes; or inhibit binding of A-peptide
non collinear and a procession of the proliferation or any action of the proliferation or inhibit binding of A-peptide
non collinear and a procession of the proliferation of moneyers (BMCs).

The present sequence is the coding sequence for one such PRO protein. It was found that the PRO genes are amplified in the genome of tummour cells. The gene amplification is expected to be associated with the overexpression of the gene product and contributes to tummourigenesis. Therefore, antagonists of PRO proteins are useful for the treatment of benign or malignant tummours, leukaemias, lymphoid malignancies and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, epithelial, inflammatory and immunologic disorders.

The Invention relates to novel numan anglogenesis associated proteins designated PRO proteins (AAB53064-B53097), and to nucleic acids encoding PRO proteins. The Invention also relates to vectors and host cells comprising a PRO nucleic acid, the recombinant production of a PRO protein. PRO antibodies specific for a PRO protein, fusion proteins comprising a PRO nucleic acid, the recombinant production of a PRO protein, agonists or antagonists of a PRO protein, and comprising a PRO protein, agonists or antagonists of a PRO protein, and additionally encompasses methods of identifying modulators of PRO compounds which inhibit the expression of a PRO gene. The invention additionally encompasses methods of identifying modulators of PRO compactions in a PRO gene, or the expression level of a PRO gene within a particular tissue; treating a cardiovascular, endothelial or anglogenic disorder via the administration of a PRO protein, PRO nucleic acid; and methods of inhibiting or stimulating endothelial or PRO agonist or antagonist; are troviral gene therapy vector comprising a cardiovascular, and methods of inhibiting or stimulating endothelial or pRO nucleic acid; PRO protein, or an agonist or antagonist; and protein, or an agonist or stimulating endothelial or angionist and PRO antagonists may be used as therapeutic agents to treat cardiovascular, endothelial or angioned angionesis, such as the administration of a PRO proteins, antibodies against PRO proteins, diabetic retinopathy, rheumatoid arthritis, Crohn's disease, poorlasis, of and arthritis, cardiovascular, endothelial or angiogenic disconder, such as a thereosclerosis, volcers, wounds, cancer, Alzhelmen's disease, buttington's disease, or stroke. PRO nucleic acids are additionally useful in the cecombinant production of PRO proteins, an also be used to produce transgenic company. The process and also produce transgenic company the process and also process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         animals useful for the development and screening of potential therapeutic agents.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful for preventing, diagnosing and treating diagnosing porticities and cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with imappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors associated with decreased PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA77721 and AAB24335 represent nucleotide and protein sequences used in
                                                                                                                                                                                 Ä

The gene has also been identified in cDNA libraries from novary, testis, heart, lung, skelterial muscle, adrenal medulla, adrenal cortex, thymus, prostate, small intestine and colon. A cDNA clone is deposited as ATCC 97756. Also provided colon. A cDNA clone is deposited as ATCC 97756. Also provided CTGF-3 polypeptides. CTGF-3 nucleic acid sequences or their fragments, e.g. primers or probes, can be used to diagnose diseases thereoffs-3 polypeptides is enhanced, e.g. cancer, arthritis, fibrosis or atherosclerosis, or diseases where expression is decreased such as in osteoporosis. Disorders characterised by

The present invention describes Wnt-1 induced secreted polypeptides, WISP-1, 2 and 3. The novel WISP polypeptides, designated WISP-1, WISP-2 and WISP-1 have homology to connective tissue growth factor (CTGF). Products from the present invention can be used to treat WISP-related disorders such as breast, ovarian, and colon cancer or melanoma. The products can be used to treat atteriosclerosis. The products can also be used to treat other diseases e.g. benign and malignant tumours, leukaemia and lymphoid malignancies, neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial stromal, and blastocoelic disorders, desmoplasia, fibrotic lesions, kidney disorders, and other wounds, connective tissue disorders, catabolic states, testicular-related disorders, and inflammatory, anglogenic and immunologic disorders including arteriosclerosis. The products can also be used for detection and diagnosis especially of individuals with neoplastic cell growth or proliferation. The products can be used to transgenic or knock-out animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  482

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 17,
